

For the scenario below identify the entities, their attributes and appropriate keys

The Angel Warehouse

The Angel Warehouse stores **items** for its parent company. The warehouse is organised into **bays**, which are storage areas, but the items themselves are stored in **bins**. Each **bay contains a number of bins**. Each bay is identified by a unique **bay number** and the **bay location** and the **height of the bay** are recorded. Each **bin has a different number** within the bay, always starting with bin no. 1, and while some bays have only 5 bins some have over 50. The **size of each bin** is recorded.

Some bays have a parking spot for one fork lift to help move items round the warehouse and lift items into bins. **Each fork lift is allocated to a bay**. Each fork lift has a **unique equipment number** and the **maximum carrying weight** of the fork lift needs to be known. Some fork lifts are **petrol driven** while some are electric.

For all bins the **maximum loaded weight** must be known.

When an item is taken into the warehouse it is assigned a **unique number** and the **date** is recorded as well as the **item weight**. Bins can store a number of items and when an item is put in a **particular bin this date** is also recorded. Items can be moved back and forth between bays and bins to optimise the warehouse storage.

Warehouse

Bays

Bays

Bay number (Key)
Bay location – position 0,5
Bay height – 5m
Number of Bins - 50

Bins

Forklift Parking? – yes/no

Forklift

Bay

Equipment number (Key) - 02
Max weight – 100kg
Fuel mode – petrol/electric

Bins

Bin Number (Key) - 47
Bin size
Max weight – 100kg

Items

Item date received (in bin) – 10/09/2024

Items

Item number (Key)
Date received (in warehouse) – 07/09/2024
